Summary

2026 B.Tech CSE graduate (CGPA 8.8) building LLM agents, RAG apps and MCP tools in Python. Shipped two deployed agent systems with evals in CI, plus four MCP servers.

Technical Skills

LLMs & agents: Function calling, RAG, MCP / FastMCP, LangChain, LangGraph, NVIDIA NOOA, structured outputs
Models & retrieval: OpenRouter, NVIDIA NIM, Claude and Gemini APIs, embeddings, FAISS vector search
Evaluation & testing: Agent evals in CI, adversarial / prompt-injection tests, LangSmith, pytest, Vitest, Playwright
Backend: Python, TypeScript, SQL, FastAPI, Pydantic, SQLAlchemy, REST APIs, React
Data & infrastructure: PostgreSQL, SQLite, Docker, GitHub Actions, Cloudflare, Render, DigitalOcean, Git, Linux

Projects

TraceIntel – Evidence-Grounded Security Agent Live · Demo · GitHub **2026**
Python, FastAPI, NVIDIA NOOA, OpenRouter, PostgreSQL, React, Docker, GitHub Actions

- Built an **LLM agent** that checks which token permissions a crypto transaction left open and advises revoke, verify or review, using **typed read-only tools** under a hard call budget.
- Grounded every claim: a validator rejects any sentence not backed by code-computed evidence, invalid output gets one repair attempt, and a **rule-based baseline** answers when the model fails.
- Wrote **24 CI evals** (**5 adversarial**: prompt injection, out-of-scope tool calls, fabricated claims) plus **95 tests**.
- Shipped it behind a FastAPI + PostgreSQL API with per-client rate limits, daily LLM cost caps and model-call traces.

ARIS – Multi-Branch Research Agent for Dependency Decisions Site · Demo · GitHub **2026**
Python, Heym, gpt-oss-120b on NVIDIA NIM, Tavily (MCP), Docker, DigitalOcean, Cloudflare

- Built a **104-node agent workflow** with **7 parallel research branches** over 8 sources (GitHub, OSV, PyPI, npm, Stack Exchange, web search); LLMs extract evidence and write a repo-specific adopt / trial / hold / avoid brief, sent by email.
- Kept numbers out of the model: **18 Python nodes** compute 6 weighted scores, a security veto and confidence.
- Added a **Python execution node to the Heym workflow engine** (7 tests, proposed upstream) that also trims large API payloads before they reach the LLM; self-hosted it with Docker.

Agon – Guardrailed AI Trading Agent (team hackathon) Site · Demo **2026**
TypeScript, MCP, Solana, Jupiter API

- Co-designed an **MCP server** that lets AI clients such as Claude Code research tokens and paper-trade at live prices through typed tools; reached **100+ registered accounts**.
- Designed the guardrails outside the LLM: a deterministic guard enforces spending caps and slippage limits before signing, and uncertain outcomes fail closed with no blind retries.

MCP Servers – Study Buddy & GitHub Ranker GitHub **2026**
Python, MCP SDK (FastMCP), SQLite, Pydantic, Render

- **Study Buddy**: Claude Desktop server with **13 tools, 3 resources and 4 prompts** over notes and past papers, with SQLite mastery tracking; **GitHub Ranker**: remote MCP server on Render that ranks candidates by skill.

Experience

Employability.life | RPA Developer & Business Analyst (experiential learning) **Sep 2024 – Nov 2024**
Work-readiness program with Federation University Australia *Kolkata, India*

- Automated manual Excel reporting with UiPath, saving **10+ hours per week** and cutting errors by **70%**; wrote process design documents and led requirements, testing and sign-off across Agile sprints (certificate, recommendation).

Education

Sister Nivedita University – B.Tech, Computer Science and Engineering; CGPA: **8.80/10** **Jun 2022 – Jun 2026**

Achievements & Certifications

- **2nd Place, BRICS-FS-36 Data Analysis & Visualization**, international final, China, Dec 2024 (certificate)
- **EL Excellence Award, Top 50 Learner**, Federation University Australia, Feb 2026 (award, citation)
- **MCP Mastery**, Fractal Analytics / Coursera | **Applied Machine Learning in Python**, University of Michigan
