## Summary

Computer Science graduate (CGPA: 8.80/10) specializing in self-hosted agentic AI infrastructure and the Model Context Protocol (MCP) across three shipped systems. Most recently built [ARIS](#), a live multi-agent dependency-scoring platform with deterministic, audited scoring kept strictly separate from LLM narrative.

## Education

Sister Nivedita University

B.Tech in Computer Science and Engineering

Jun 2022 - Jun 2026

CGPA: 8.80 / 10

## Technical Skills

Languages: Python, SQL

GenAI & Agentic AI: LLM agents, agent orchestration, MCP, NVIDIA NIM APIs, agent eval design, prompt engineering

Data Engineering: dbt, Snowflake, AWS S3, Apache Airflow, ELT Pipelines, PostgreSQL

Analytics & BI: Apache Superset, Tableau, Power BI, Excel, Streamlit, scikit-learn

Tools & Infra: Docker, CI/CD, Git, REST APIs, UiPath (RPA), Oracle VBCS

## Work Experience

Employability.life (XPMC Program) - Federation University Australia [\[Certificate\]](#)

Sep 2024 - Nov 2024

Experiential Learner - RPA Developer & Business Analyst

Kolkata, India

- Cut manual data-processing time by **10+ hours/week**, reduced error rate by **70%**, with **UiPath RPA** for Excel reporting.
- Authored **Process Design Documents (PDDs)** for automation pipelines across multiple Agile sprints, coordinating directly with stakeholders on scope and sign-off.

## Projects

ARIS - Technology Adoption Intelligence [\[Live\]](#) [\[GitHub\]](#)

2026

Heym (self-hosted fork), Python, LLM Agents, NVIDIA NIM, GitHub/OSV/Tavily APIs

- Architected a **7-branch parallel agent DAG** on a self-hosted Heym fork, scoring dependencies across **6 weighted dimensions**; a **Stack Compatibility agent** flags conflicts via PEP 621/503 manifest parsing across **7 project archetypes**.
- Eliminated context-overflow failures via a custom **PythonExec** node for inline scoring and MCP payload compression.
- Enforced a strict **deterministic-scoring / LLM-narrative separation** so every numeric score comes from audited Python, not the LLM. Self-hosted via **Docker Compose** on a **DigitalOcean droplet** with zero-downtime build-then-swap deploys.

MCP Driven DevOps Orchestration Hub [\[GitHub\]](#) [\[Demo\]](#)

2025 - Present

Docker, OpenClaw, Telegram Bot, MCP, CI/CD

- Fully containerized and sandboxed the **OpenClaw** LLM agent in Docker, hardening CI/CD execution for secure pipeline runs.
- Integrated a **Telegram bot** with **MCP skill routing** for natural-language CI/CD triggering and log-summarization.

MCP Protocol Reference Server (study-buddy) [\[GitHub\]](#)

2026

Python, MCP (Model Context Protocol), SQLite, Pydantic, uv

- Built a Python MCP server exposing **13 tools**, **3 resources**, and **4 prompts**, giving Claude structured, **path-traversal-safe** access to study notes and past-year papers (PDF, DOCX, and image support).
- Implemented **SQLite-backed mastery tracking** with fuzzy topic matching to prevent silent duplicate topic creation, plus PYQ-analysis tools that extract real past exam questions verbatim or generate new ones matching a paper's structural style.
- Documented and shipped for the **Codédex Monthly Challenge (June 2026)**, with a full README, architecture diagram, and setup tutorial.

## Achievements

2nd Place - BRICS-FS-36 Data Analysis & Visualization [\[Certificate\]](#) | *WorldSkills, Russia, Dec 2024*

Ranked **2nd globally** in an 8-hour analytics challenge using **Python**, **Excel**, **Tableau**, and **Streamlit**.

EL Excellence Award - Top 50 Learner [\[Award\]](#) [\[Citation\]](#) | *Federation University Australia, Feb 2026*

Selected among **Top 50 Learners** globally; citation co-signed by both organizations' COO and CEO.

## Certifications

Applied ML in Python [\[Certificate\]](#) - U. Michigan

MCP Fractal [\[Certificate\]](#) - Coursera

OCI AI Foundations [\[Certificate\]](#) - Oracle

SQL [\[Certificate\]](#) - CU Boulder
