Summary

AI engineer (B.Tech CSE 2026, CGPA **8.80/10**) who builds AI agents you can trust: the AI does the reading and writing, code checks every fact, and automated tests try to break it before each release. Two agent projects are live, with demos.

Technical Skills

Agent frameworks: LangChain, LangGraph, LangSmith, LlamaIndex, OpenAI & Anthropic SDKs, MCP, n8n
Models & retrieval: NVIDIA NIM, NVIDIA NOOA, OpenRouter, Hugging Face, Ollama, pgvector, Chroma
Evals & testing: Langfuse, Ragas, Promptfoo, pytest, Playwright
Languages & backend: Python, TypeScript, FastAPI, Pydantic, SQLAlchemy, React, PostgreSQL, SQLite, MongoDB
Cloud & DevOps: Docker, GitHub Actions, AWS (S3, EC2, Lambda), Vercel, Cloudflare, DigitalOcean

Projects

TraceIntel - AI Agent for Crypto Wallet Permissions traceintel.eshita.dev Demo Code **2026**
Python, FastAPI, NVIDIA NOOA, OpenRouter, PostgreSQL, React, Docker, GitHub Actions, Cloudflare

- Built and launched a web app that lists every token permission an **Ethereum or Monad** transaction granted, and flags which ones are still active and risky today.
- Added an **AI agent** that investigates each spending contract using **3 read-only tools** within a fixed call limit; it can cite only facts the code has verified, and the app falls back to rule-based results if the AI gets it wrong.
- Wrote **24 test scenarios** that run on every commit, including **5 where the AI is made to misbehave on purpose** (e.g. prompt injection), to prove the safeguards hold.
- Protected the live site with rate limits and a daily AI cost cap, logged every agent step, and covered the code with **~95 automated tests**.

ARIS - AI Research Workflow for Choosing Software Libraries aris.eshita.dev Demo Code **2026**
Python, Heym, NVIDIA NIM, Tavily (MCP), PostgreSQL, Docker, DigitalOcean, Cloudflare

- Built a tool that takes a software library and your repo, researches it from **7 angles in parallel** (GitHub activity, security advisories, downloads, community, alternatives), and emails an adopt / trial / hold / avoid verdict.
- Limited the AI to extracting findings and writing the summary; **~1,800 lines of Python** compute every score, so the same evidence always gives the same verdict.
- Wrote a custom Python code step for the open-source Heym workflow tool (**7 tests**, shared with its maintainers) and self-hosted ARIS with Docker.

Study Buddy - MCP Server for Studying with Claude Code **2026**
Python, MCP SDK (FastMCP), SQLite, Pydantic

- Built an MCP server that lets Claude Desktop teach and quiz you from your own notes, PDFs, and past exam papers (**13 tools, 3 resources, 4 prompts**).
- Tracks topic mastery in SQLite so quizzes target weak areas, and blocks file access outside the notes folder.

More agent work: 3 more MCP servers (one hosted remotely), a research workflow that runs 3 AI agents in parallel, and a Telegram DevOps agent for a team project Code Demo.

Experience

Employability.life - Federation University Australia Certificate Recommendation **Sep 2024 - Nov 2024**
Experiential Learner - RPA Developer & Business Analyst *Kolkata, India*

- Built UiPath bots that automated manual Excel reporting, saving **10+ hours a week** and cutting errors by **70%**; wrote the process documents and ran requirements, testing, and sign-off across Agile sprints.

Education

Sister Nivedita University **Jun 2022 - Jun 2026**
Bachelor of Technology in Computer Science and Engineering; CGPA: **8.80/10**

Achievements

2nd Place - BRICS-FS-36 Data Analysis & Visualization (international final, China) Certificate Dec 2024
EL Excellence Award - Top 50 Learner Award Citation Feb 2026

Certifications

Applied Machine Learning in Python - University of Michigan
Model Context Protocol (MCP) Mastery - Fractal Analytics / Coursera
SQL - University of Colorado Boulder
